

Aluminium foil - for flexible packaging

Information

Description: Aluminium foil is still the best barrier layer against light, gases and aromas. This compact web seminar will provide you with valuable information on the production, processing and resulting properties of barrier layers made of aluminium foil. Starting with alloys, rolling and annealing parameters through to lamination and subsequent use as flexible packaging and beverage cartons, you will receive tips and tricks for selecting and evaluating different types of foil and possible defect patterns.

Target group: Aluminium foil is the preferred choice for anyone who needs optimum barrier against light and gases. The participant will receive practical information on use and its advantages.

Level: **Level 2** - Previous knowledge is helpful, but not required
