

Film manufacturing processes - Influence on film properties - Basics for flexible packaging films, part B

Beschreibung:	This part is about flexible film production which has a significant influence on film properties. The maine processes, blown- and cast film production, are presented in detail. In particular, the influence of the processes on mechanical and optical properties as well as costs are discussed. Subsequently, stretching/orientation processes are presented, which bring further improvements of different properties. Typical examples are PP-BO, BOPE or PET-BO films, which are often used in laminates. In a final step technologies are discussed to enhance the barrier of polymer based films.
Zielgruppe:	Employees from production, development, packaging technology, QA, purchase and sales as well as marketing
Niveau:	Stufe 1 - keine Vorkenntnisse erforderlich
Weitere Informationen:	Dauer: 2:00h
